Reviewer's report:

Dear Authors

Thanks for your clinical useful manuscript entitled (Efficacy of the combination use of aprepitant and palonosetron for improving nausea in various moderately emetogenic chemotherapy regimens)

You need to explain the significant difference in the median age and primary organ between the two groups. As those two parameters could effect the results of comparison between the two groups. Moreover you must take in consideration the types of cancer such as digestive organ cancers, lung cancers, and gynecological cancers which also might change the results.

Are the methods appropriate and well described?
