Reviewer’s report

Reviewer’s report:

I read the revision of manuscript titled "Quality of Albendazole Tablets Legally Circulating in the Pharmaceutical Market of Addis Ababa, Ethiopia: Physicochemical Evaluation". The authors replied in a not completely exhaustive way to the proposed comments. However, I must stress again the lack of data obtained from the analyses by FTIR, HPLC and UVS.

In order to allow the reviewers to assess if the qualitative and quantitative analyses have a scientific value, in my opinion the authors should include all the chromatograms and the spectra of the analyses carried out on the 10 samples analyzed, as well as on the standard. Also for quantitative analysis, the authors should indicate the calibration curve with the respective equation and goodness. These data could be placed in the supporting information.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
