Magnitude and causes of first line antiretroviral therapy regimen changes among HIV patients in Ethiopia: a systematic review and meta-analysis
Manuscript Number: PHAT-D-19-00113

Rational of the objective need to elaborate as changing of ART is based on clinical parameters. So why do we need to know and what would be its effect on the treatment outcomes. I will suggest to elaborate and provide more background/rational.

Why outside Ethiopian study were excluded, any rational for that……? 

What was the Key wording for the data extraction…..?

Based on my observation, the study is limited for Ethiopia, then better to publish in some Ethiopian medical journal where local people get benefit from this research OR otherwise author has to provide some background/rational that why they selected specific community. While, I will preferred for the 2nd option.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
