Reviewer’s report

Title: A Serious Adverse Drug Reaction Probably Induced by Clonazepam: a case report of Myotoxicity

Version: 0 Date: 18 Sep 2019

Reviewer: Giovanni Assenza

Reviewer's report:

The case report of the authors highlights a very rare adverse effect of clonazepam.

The only concern I have is about the strength of association between the clonazepam absorption and a Myopathy.

Actually authors did not report any electrophysiological examination, biopsy or detailed neurological examination supporting a primitive myopathic damage.

I mean that it could be also mediated by nerve injury or by a neuromuscular plaque disorder.

In this light, the association is Probable and thus authors should add the term probable all along the manuscript and in the title and the above reported limitations

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
