Reviewer’s report

Title: Nonsteroidal sulfamate derivatives as new therapeutic approaches for Neurofibromatosis 2 (NF2)

Version: 1 Date: 18 Sep 2019

Reviewer: Alessandra Gianoncelli

Reviewer's report:

I suggest the authors to better clarify the legend of figure 3. Now it is clearer than before but there are still some small ambiguities.

In particular, in the graphs relating to the PF, the concentration curve at 7.5 µM was not reported anywhere although it was present in the legend. The Frax graphs did not show anywhere the concentration curves of both 3 and 4 µM although they were mentioned in the legend.

Finally in the bar graphs shown below there were not complete data and it was not clear why the authors wanted to put only those data; moreover, it was not even clear to which cell line they were referred respectively. Finally, the data related to the 2 µM reported in the second bar graph was not mentioned in the legend and the corresponding concentration curve was not present.

Best regards

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
