Title: Effects of β1-adrenergic receptor blockade on the cerebral microcirculation in the normal state and during global brain ischemia/reperfusion injury in rabbits

Version: 0 Date: 02 Dec 2019

Reviewer: Yanqin Gao

Reviewer's report:

This manuscript's aim to address the direct effects of β1-blockade on the cerebral microvasculature both in the normal state and ischemia/reperfusion state. A huge literatures report that β1-blocker has the vasodilation function. Author simply used cranial window method as showing the changes of the pial arteriole diameter in the normal and ischemia/reperfusion state. Authors need to demonstrated what the neuroprotective effect of landiolol via inducing significant vasodilation of the pial arterioles during ischemia/reperfusion. This study is no novelty and the data is not enough data to support the conclusion.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
