Reviewer’s report

Title: Reversal of Fibrosis in Patients with Nonalcoholic Steatohepatitis After Gastric Bypass Surgery

Version: 0 Date: 27 Mar 2017

Reviewer: Homero Rivas

Reviewer's report:

Excellent manuscript. It would be very interesting to actually have liver biopsies after the bypass, however based on the lack of clinical need, this would put patient at risk. On the other hand, any of these patients who may have need a reoperation, it would have been of great value to repeat biopsy for pathology se-staging of liver disease.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
