Reviewer’s report

Title: Morbidity and health-related quality of life of patients accessing laparoscopic sleeve gastrectomy: a single-centre cross-sectional study in one province of Canada

Version: 0 Date: 10 Aug 2017

Reviewer: Mikael Victorzon

Reviewer's report:

This study provides only baseline data regarding quality of life of Canadian patients coming for sleeve gastrectomy. Nothing is said or discussed about the impact of the operation on QoL. It is a well known fact and has already been shown in numerous studies that the QoL of the morbidly obese is significantly lower compared to the general age-, and sex matched population. This study does not bring us anything new that could be of general interest. The authors should await at least 2 years (preferably 5 years) follow up of at least 80% of the patients in order to show how the sleeve gastrectomy has influenced the QoL.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
