Reviewer's report

**Title:** Vitamin A supplementation programmes are missing children from scheduled castes and scheduled tribes. New evidence from India

**Version:** 5  **Date:** 15 March 2015

**Reviewer:** Avula Laxmaiah

**Reviewer's report:**

To Authors

In general, the authors have improved the manuscript satisfactorily. However, these manuscripts require some additional power pointcvre

1. Regarding VAS Coverage and full VAS coverage, suggested to give detailed definitions in the methodology.

2. Still two things need to be clarified, one is no doubt the VAS coverage is increased significantly over a period of time among the children in the districts, where SC/ST population is more, Even though it is increased in recent times, in fact. Infact, the coverage is low among SC/ST population

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

Authors may take care of all these issues
