Reviewer’s report

Title: Determinants of appropriate complementary feeding practice among mothers having children 6-23 months of age in rural Damot Sore district, Southern Ethiopia; a community based cross sectional study

Version: 1 Date: 23 Jun 2017

Reviewer: Richmond Aryeetey

Reviewer's report:

The paper is premised on addressing an important issue of using multiple indicators to assess complementary feeding. However, the approach was adequately convincing. There is no novelty in the way existing indicators were combined.

Neither does it link the tested composite indicator with any justification.

A major flaw is that details for the methods are not given.

Further, there are important grammatical errors which need to be addressed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
Please indicate the quality of language in the manuscript:
