Reviewer's report

Title: Fish oil supplementation in chronic obstructive pulmonary disease: feasibility of conducting a randomised controlled trial

Version: 0 Date: 12 Jun 2017

Reviewer: Kristina Jackson

Reviewer's report:

This manuscript achieves its objectives of describing the results of a pilot trial, exploring logistical challenges in conducting the trial, and providing recommendations for a successful full-scale trial. It is extremely well written and has only a few errors (both on line 226). The only suggestion I have is to make a small table of the recommendations so they are easily identifiable; however, this is not necessary and can be ignored if the authors choose. I recommend that this paper be accepted for publication with little to no revisions.

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Quality of written English
Please indicate the quality of language in the manuscript:

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?
6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I work for OmegaQuant Analytics, which provides Omega-3 Index testing to both research and commercial partners in the US. The recommendation that the Omega-3 Index should be measured at baseline and at the end of the trial could be beneficial to OmegaQuant.
