Reviewer’s report

Title: Positive melioidosis serology in a patient with adult onset Still's disease: A case report of a diagnostic dilemma

Version: 1 Date: 19 Sep 2018

Reviewer: Philippe Guilpain

Reviewer's report:

The authors improved the manuscript substantially: the three main hypothèses are more clearly indicated as well as the difficult diagnosis procedure.

I suggest that the concept of "confusion" (see the abstract) also appears in the discussion section and conclusion.

No additional comments

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
