Reviewer’s report

Title: Biomarkers of cardiovascular risk across phenotypes of osteoarthritis

Version: 0 Date: 20 Apr 2019

Reviewer: Zoltan Szekanecz

Reviewer's report:

This is an interesting piece of work. OA has been associated with increased CV risk. In this study authors assess OA subsets in relation to arterial stiffness.

This is a simple study, only stiffness parameters (AIx, PWV) were evaluated in relation to OA subsets. Some comments

1. Table 1 contains information on smoking and BMI. Stiffness results should be correlated with these lifestyle-related parameters.

2. Authors found correlations in hand OA only. Hand OA is sometimes more inflammatory and may resemble RA. Did the authors correlate stiffness with inflammatory markers, such as CRP and ESR?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
