The manuscript is generally well written and the data presented clearly. The only issue I have is that the number of samples used in some experiments are rather small and so difficult to draw any concrete conclusions. The material and methods are well described but the statistical section (lines 10 -14 in page 9) is inadequate. Please explain more fully the statistical methods used in the study. The discussion section is focused but rather concise! Please expand.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
