Reviewer’s report

Title: The impact of the illness label ‘gout’ on illness and treatment perceptions in Māori (Indigenous New Zealanders)

Version: 0 Date: 05 Dec 2019

Reviewer: Reviewer 2

Reviewer’s report:

PEER REVIEWER ASSESSMENTS:

OBJECTIVE - Full research articles: is there a clear objective that addresses a testable research question(s) (brief or other article types: is there a clear objective)?

Yes - there is a clear objective

DESIGN - Is the current approach (including controls and analysis protocols) appropriate for the objective?

Yes - the approach is appropriate

EXECUTION - Are the experiments and analyses performed with technical rigor to allow confidence in the results?

Yes - experiments and analyses were performed appropriately

STATISTICS - Is the use of statistics in the manuscript appropriate?

Yes - appropriate statistical analyses have been used in the study

INTERPRETATION - Is the current interpretation/discussion of the results reasonable and not overstated?

Yes - the author's interpretation is reasonable

OVERALL MANUSCRIPT POTENTIAL - Is the current version of this work technically sound? If not, can revisions be made to make the work technically sound?

Yes - current version is technically sound
PEER REVIEWER COMMENTS:

GENERAL COMMENTS: This study postulated that the perception of an illness could change the way the patients and the doctors respond to it. They have demonstrated that in a population who are disproportionately affected by gout, the disease label influences illness perceptions and beliefs about management.

This is a simple report that amplified a previous report (reference 19) with the same methodology. The report is well written, well designed and the discussion is appropriated. The study is simple, they conduct a survey in supermarkets with a questionnaire previously tested and examined the results. The authors acknowledge the study limitations and explained it in the discussion section. In my opinion, the question they postulated is an important issue. Gout is a common and treatable disease. However, due to many reason, many gouty patients are not treated, undertreated or leave the treatment. To understand why it occurs will help to change this fact and this is the reason of this study.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
