Reviewer’s report

Title: Percutaneous treatment of IVC obstruction due to post-resection hepatic torsion associated with IVC thrombosis

Version: 0 Date: 22 Jan 2019

Reviewer: Raymond Chung

Reviewer’s report:

Well written article of a rare case treated completely endovascularly.

Few points of clarification:

- please clarify time frame of the endovascular treatments described (1st thrombectomy, 2nd thrombectomy and stent). What was the time from 1st thrombectomy to rethrombosis of IVC? Time frame for 2nd thrombectomy and stent placement?

- please clarify when IVC filter was removed in relation to the thrombectomy.

- authors describe follow up with stent patency up to 2 years. Was this with continued rivaroxaban treatment alone? Presumably there was no need for secondary intervention to maintain stent patency.
